WORK EXPERIENCE

Indian National Centre for Ocean Information Services(INCOIS) | ML Intern

Jun 2024 - Aug 2024

[Github link](#)

- Built a regression model to forecast Significant Wave Height (SWH) using wind data, achieving strong correlation and accurate predictions for maritime applications.
- Analyzed the relationship between wind speed and SWH using regression coefficients to quantify the strength and direction of their correlation.
- Enabled data-driven insights for coastal and offshore planning by modeling SWH trends, supporting safer and more efficient maritime operations.

EDUCATION

Bharati Vidyapeeth's College of Engineering

B.Tech in Electrical and Electronics Engineering (Minor in CS)

2022 - 2026

SKILLS

Languages	Python, Java, C, C++, SQL, JavaScript
Technical Proficiency	Power BI, Arduino, React, Node.js, Express, Flutter, Linux, Git, OOP, REST APIs
Core Strengths	DSA, Data Analytics, deep learning , web scrapping , ML , tableau , Debugging, Clean Code Practices, Problem-Solving

PROJECTS

Banking Dashboard [Github link](#)

- Developed a dynamic Power BI dashboard to analyze loan applicant profiles and assess risk levels for lending decisions in the banking sector.
- Leveraged interrelated datasets (bank-client relationships, investment profiles, gender, time periods) using primary and foreign keys to enable comprehensive insights.
- Enabled data-driven decision-making by identifying high-risk profiles, reducing potential loan defaults, and supporting financial institutions in minimizing lending risks.

BLINKIT Sales analysis [Github link](#)

- Conducted a comprehensive sales performance and customer behavior analysis for Blinkit using Excel for data preprocessing and SQL for querying structured data.
- Developed interactive dashboards in Power BI to visualize KPIs like Total Sales, Average Rating, and Sales by Item Type, Fat Content, and Outlet Characteristics.
- Utilized Python in Jupyter Notebook (Pandas, Matplotlib, Seaborn) for detailed EDA, trend analysis, and KPI breakdowns to derive actionable business insights.

Stock Prediction Using LSTM [Github link](#)

- Developed an LSTM-based time series prediction model using TensorFlow/Keras, achieving over 95% accuracy in forecasting Google stock opening prices on unseen test data.
- Preprocessed financial data using Pandas and MinMaxScaler, engineered lag-based features with a 60-day lookback window, and trained the model on over 1,200 data points.
- Validated model performance using visual comparisons and mean squared error loss, with training optimized via Adam optimizer and Dropout regularization to prevent overfitting.

EXTRA-CURRICULAR ACTIVITIES

IEEE BVCOE-Vice Chairman (RAS)

- Built an AI-powered assistive device under IEEE titled Margdarshak, enabling real-time object detection and voice output through smart glasses for visually impaired users.
- Developed a two-stage pipeline: object-to-text recognition using computer vision and conversion to audio via text-to-speech (TTS), enhancing real-world usability.
- Integrated camera, microcontroller, and speaker system into wearable glasses, delivering spoken alerts through embedded earpieces to aid safe daily navigation.
